

EV Ready Plan

Supercharge your future.

What Is It?

Think of it as a blueprint for the future of your residential building. An EV Ready Plan ensures that every resident has easy access to electric vehicle (EV) charging by providing at least one EV Ready parking space per unit.

What does this mean for you?

It's all about being prepared. EV Ready means that each parking space has the necessary electrical wiring within a short distance to support Level 2 Electric Vehicle Supply Equipment (EVSE). Whether it's a junction box or a dedicated circuit, we've got you covered.

Why should you be EV Ready?

It's about staying ahead of the curve. By investing in an EV Ready Plan, you're not just future-proofing your building—you're also embracing sustainability and meeting the needs of your residents. Plus, we are registered professional electrical engineers who work closely with you to ensure it meets all requirements.

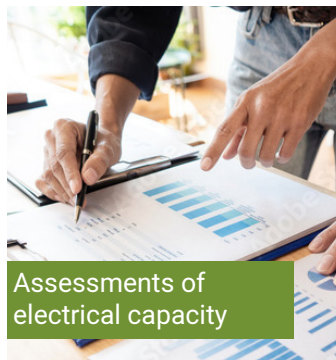

The EV charger rebate program for homes, workplaces, and multi-unit residential buildings has been Funded by the Government of B.C.'s Ministry of Energy, Mines and Low Carbon Innovation. For more information check their website: B.C.'s EV charger rebate program

What's Included in the EV Ready Plan?

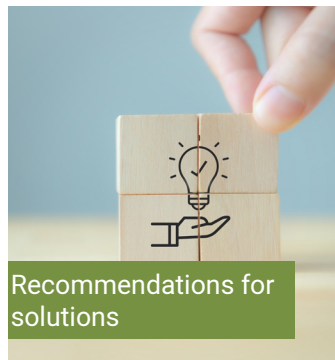

Don't worry, we cover all the bases. Here are some things our plan covers to ensure that you are EV ready.
